PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with **9 years of experience** specializing in high-performance frontend systems (70%) paired with resilient backend service delivery (30%). Deep expertise designing scalable React and Next.js architectures, micro-frontends, and architecting Node.js and Go BFF (Backend-for-Frontend) layers backed by Redis, MongoDB, and MySQL. Proven track record owning global checkout, pricing platforms, and multi-gateway payment integrations. Advanced practitioner of agentic AI-assisted engineering workflows (Claude Code, Cursor) to radically accelerate delivery lifecycles, automate test coverage, and elevate code hygiene. Open to international relocation and remote contracts.

TECHNICAL SKILLS

- **Frontend Architecture (Primary):** React, Next.js, TypeScript, JavaScript (ES6+), Redux, Zustand, HTML5, CSS3, SASS, LESS, MaterializeCSS
- **Backend & BFF Layer:** Node.js, Express, Go (Golang), RESTful APIs, Microservices, Middleware Routing
- **Databases & Caching:** Redis (In-memory caching, latency reduction), MongoDB, MySQL, LocalStorage Caching
- **Platform & Performance:** Micro-Frontends (Webpack Module Federation), Webpack, Vite, Lighthouse (Core Web Vitals), Bundle Splitting, CI/CD Pipelines
- **Testing & Observability:** Jest, React Testing Library, SonarCloud, Elastic APM, Automated Regression Suites
- **AI-Assisted Engineering:** Claude Code, Cursor IDE, Agentic Workflows, LLM-based refactoring and automated test generation

PROFESSIONAL EXPERIENCE

Brevo (Formerly Sendinblue) Jan 2022 -- May 2026
Senior Software Engineer (Full-Stack / Frontend-Focused) Noida, India
Stack: React, JavaScript/TypeScript, Go, MongoDB, Webpack Module Federation, Stripe, Adyen, Jest, React-testing-library, SonarCloud

- **Led frontend and BFF development for Pricing V5**, migrating to a single-vertical, add-on-based pricing model, launching a new Pro plan and enterprise sales package within a tight 6-month delivery timeline.
- **Extended and adapted Go and MongoDB pricing endpoints** to aggregate custom checkout payloads, cutting dependency on core backend teams and speeding up feature delivery cycles.
- **Unified cross-vertical checkout architecture (Pricing V4)**, integrating CRM, Conversation, and Phone offerings into a streamlined checkout flow with multi-gateway payments (Stripe, Adyen) and localized compliance handling.
- **Designed and governed micro-frontend architecture** using Webpack Module Federation, establishing shared navigation patterns and unblocking independent deployments for 6+ distributed squads.
- **Drove comprehensive web performance initiatives**, elevating Lighthouse scores from 50 to 90+, cutting bundle sizes by 60%, and slashing First Contentful Paint (FCP) by 40% via code-splitting and edge caching.
- **Integrated agentic AI engineering workflows** (Claude Code, Cursor) across a team of 6 engineers to automate API contract mockups, accelerate Jest regression test generation, and enforce SonarCloud quality baselines.
- **Guaranteed production stability during Brevo rebranding**, coordinating complex frontend theme migrations and comprehensive QA validation workflows across the new global domain.

Brevo (Formerly Sendinblue) Sept 2019 -- Dec 2021
Software Engineer (Frontend-Focused) Noida, India
Stack: React, TypeScript, JavaScript (ES6+), Node.js, Express, MongoDB, Redux, Webpack, Module Federation, Jest

- **Developed end-to-end V2 pricing and checkout user journeys**, standardizing state management flows, component-level caching, and smooth frontend API integrations.
- **Decoupled pricing infrastructure from legacy monolith**, migrating systems into a dedicated, high-ownership React repository with standardized Webpack compilation pipelines.
- **Architected reusable shared UI component libraries**, publishing them as internal packages to eliminate cross-team dependencies and accelerate release cycles by 30%.
- **Integrated global payment methods**, embedding PayPal and Direct Debit payment streams into existing pricing and checkout flows with full client-side validation.
- **Built and supported utility Node.js/Express APIs**, backing internal services with MongoDB data structures to support frontend release workflows and pricing mocks.
- **Optimized legacy React components**, refactoring lifecycle methods and reducing re-renders to significantly improve application responsiveness and maintainability.
- **Maintained 80%+ unit test coverage** across all mission-critical billing flows using Jest and React Testing Library to prevent checkout regressions.

Afinoz July 2017 -- Sept 2019
Software Developer Noida, India
Stack: React, Node.js, Express, MongoDB, MySQL, Redux, Chart.js, MaterializeCSS, SASS

- **Spearheaded full migration of the flagship startup platform to React**, slashing homepage initial load times from 9s to 0.8s while delivering end-to-end Personal and Business Loan eligibility flows.
- **Engineered custom high-throughput sitemap scraper in Node.js**, extracting, indexing, and cataloging over **250,000+ dynamic URLs** to shatter the 500-URL limitation of free commercial tools and massively boost technical SEO search rankings.
- **Developed internal Node.js and Express REST APIs** utilizing MySQL relational storage for structured loan applications alongside MongoDB for dynamic customer tracking.
- **Architected an in-house CMS** with custom rich-text editing capabilities, allowing non-technical marketing teams to publish dynamic landing pages and blogs autonomously.
- **Built an internal enterprise CRM dashboard** utilizing Chart.js, Redux-Persist, and MongoDB, saving the startup significant recurring software licensing overhead.
- **Implemented dynamic JSON-LD SEO structured data** and automated Node.js content scraping scripts to drive web visibility.

EDUCATION & ACHIEVEMENTS

B.Tech in Computer Science 2013 -- 2017
Ajay Kumar Garg Engineering College, Uttar Pradesh

1st Prize — SIBTHON Hackathon 2020
Awarded for designing and engineering high-impact internal productivity tooling at Brevo.
